| 7 | Unable to stop the virus from spreading Personal Hygiene | 4 | 3 | 12 | <p>Transmission</p> <ul style="list-style-type: none"> The virus that causes COVID-19 is mainly transmitted through droplets generated when an infected person coughs or sneezes. There are two routes by which COVID-19 can be spread: directly from close contact with an infected person (within 2 metres) where respiratory secretions can enter the eyes, mouth, nose or airways - this risk increases the longer someone has close contact with an infected person who has symptoms. Secondly, indirectly by touching a surface, object or the hand of an infected person that has been contaminated with respiratory secretions and then touching one's own mouth, nose, or eyes. <p>Handwashing</p> <ul style="list-style-type: none"> Handwashing is one of the most important ways of controlling the spread of infections, The recommended method is the use of soap, warm water for a minimum of 20 seconds and paper towels.
